

Table of Contents

	<u>Page</u>
1. INTRODUCTION	1
1.1. Scope	2
1.2. Book Organization	5
1.3. Reliability Program Elements	7
1.4. The History of Reliability Prediction	11
1.5. Acronyms	17
1.6. References	18
2. GENERAL ASSESSMENT APPROACH	19
2.1. Define System	20
2.2. Identify the Purpose of the Model	22
2.3. Determine the Appropriate Level at Which to Perform the Modeling	25
2.3.1. Level vs. Data Needed	26
2.3.2. Using an FMEA as the basis for a reliability model	28
2.3.3. Model Form vs. Level	34
2.4. Assess Data Available	36
2.5. Determine and Execute Appropriate Approach	38
2.5.1. Empirical	44
2.5.1.1. Test	44
2.5.1.2. Field Data	77
2.5.2. Physics	106
2.5.2.1. Stress/Strength Modeling	106
2.5.2.2. First Principals	111
2.6. Combine Data	114
2.6.1. Bayesian Inference	121
2.7. Develop System Model	123
2.7.1. Monte Carlo Analysis	127
2.8. References	133
3. FUNDAMENTAL CONCEPTS	135
3.1. Reliability Theory Concepts	135
3.2. Probability concepts	142
3.2.1. Covariance	142
3.2.2. Correlation Coefficient	142
3.2.3. Permutations and Combinations	143
3.2.4. Mutual Exclusivity	144

Table of Contents

	<u>Page</u>
3.2.5. Independent Events	144
3.2.6. Non-independent (Dependent) Events	145
3.2.7. Non-independent (Dependent) Events: Bayes Theorem	146
3.2.8. System Models	146
3.2.9. K-out-of-N Configurations	151
3.3. Distributions	153
3.3.1. Exponential	159
3.3.2. Weibull	160
3.3.3. Lognormal	166
3.4. References	169
4. DOE-BASED APPROACHES TO RELIABILITY MODELING	171
4.1. Determine the Feature to be Assessed	172
4.2. Determine Factors	172
4.3. Determine the Factor Levels	172
4.4. Design the Tests	174
4.5. Perform Tests and Measurements	180
4.6. Analyze the Data	181
4.7. Develop the Life Model	183
4.8. References	183
5. LIFE DATA MODELING	185
5.1. Selecting a Distribution	185
5.2. Parameter Estimation Overview	186
5.2.1. Closed Form Parameter Approximations	189
5.2.2. Least Squares Regression	190
5.2.3. Parameter Estimation Using MLE	192
5.2.3.1. Brief Historical Remarks	193
5.2.3.2. Likelihood Function	193
5.2.3.3. Maximum Likelihood Estimator (MLE)	195
5.2.4. Confidence Bounds and Uncertainty	198
5.2.4.1. Confidence Bounds with MLE	198
5.2.4.2. Confidence Bounds Approximations	199
5.3. Acceleration Models	206
5.3.1. Fundamental Acceleration Models	207
5.3.1.1. Examples	208

Table of Contents

	<u>Page</u>
5.3.2. Combined Models	210
5.3.3. Cumulative Damage Model	214
5.4. MLE Equations	216
5.4.1. Likelihood Functions	217
5.5. References	221
6. INTERPRETATION OF RELIABILITY ESTIMATES	223
6.1. Bathtub Curve	223
6.2. Common Cause vs. Special Cause	225
6.3. Confidence Bounds	238
6.3.1. Traditional Techniques for Confidence Bounds	238
6.3.2. Uncertainty in Reliability Prediction Estimates	240
6.4. Failure Rate vs pdf	243
6.5. Practical Aspects of Reliability Assessments	245
6.6. Weibayes	245
6.7. Weibull Closure Property	246
6.8. Estimating Event-Related Reliability	247
6.9. Combining Different Types of Assessments at Different Levels	248
6.10. Estimating the Number of Failures	250
6.11. Calculation of Equivalent Failure Rates	251
6.12. Failure Rate Units	252
6.13. Factors to be Considered When Developing Models	253
6.13.1. Causes of Electronic System Failure	253
6.13.2. Selection of Factors	255
6.13.3. Reliability Growth of Components	257
6.13.4. Relative vs. Absolute Humidity	259
6.14. Addressing Data with No Failures	259
6.15. Reliability of Components Used Outside of Their Rating	261
6.16. References	262
7. EXAMPLES	263
7.1. MIL-HDBK-217 Model Development Methodology	264
7.1.1. Identify Possible Variables	266
7.1.2. Develop Theoretical Model	266
7.1.3. Collect and QC Data	267
7.1.4. Correlation Coefficient Analysis	268

Table of Contents

	<u>Page</u>
7.1.5. Stepwise Multiple Regression Analysis	270
7.1.6. Goodness-of-Fit Analysis	271
7.1.7. Extreme Case Analysis	272
7.1.8. Model Validation	272
7.2. 217Plus Reliability Prediction Models	273
7.2.1. Background	273
7.2.2. System Reliability Prediction Model	274
7.2.2.1. 217Plus Background	274
7.2.2.2. Methodology Overview	277
7.2.2.3. System Reliability Model	278
7.2.2.4. Initial Failure Rate Estimate	279
7.2.2.5. Process Grading Factors	280
7.2.2.6. Basis Data for the Model	281
7.2.2.7. Uncertainty in Traditional Approach Estimates	281
7.2.2.8. System Failure Causes	282
7.2.2.9. Environmental Factor	287
7.2.2.10. Reliability Growth	291
7.2.2.11. Infant Mortality	292
7.2.2.12. Combining Predicted Failure Rate with Empirical Data	292
7.2.3. Development of Component Reliability Models	292
7.2.3.1. Model Form	292
7.2.3.2. Acceleration Factors	294
7.2.3.3. Time Basis of Models	294
7.2.3.4. Failure Mode to Failure Cause Mapping	295
7.2.3.5. Derivation of Base Failure Rates	296
7.2.3.6. Combining the Predicted Failure Rate with Empirical Data	296
7.2.3.7. Estimating Confidence Levels	298
7.2.3.8. Using the 217Plus Model in a Top-Down Analysis	298
7.2.3.9. Capacitor Model Example	299
7.2.3.10. Default Values	301
7.2.4. Photonic Model Development Example	303
7.2.4.1. Introduction	303
7.2.4.2. Model development methodology and results	306
7.2.4.3. Uncertainty Analysis	322
7.2.4.4. Comments on Part Quality Levels	325
7.2.4.5. Explanation of Failure Rate Units	325
7.2.5. System-Level Model	326
7.2.5.1. Model Presentation	326

Table of Contents

	<u>Page</u>
7.2.5.2. 217Plus Process Grading Criteria	328
7.2.5.3. Design Process Grade Factor Questions	330
7.2.5.4. Manufacturing Process Grade Factor Questions	336
7.2.5.5. Part Quality Process Grade Factor Questions	340
7.2.5.6. System Management Process Grade Factor Questions	342
7.2.5.7. Can Not Duplicate (CND) Process Grade Factor Questions	346
7.2.5.8. Induced Process Grade Factor Questions	347
7.2.5.9. Wearout Process Grade Factor Questions	348
7.2.5.10. Growth Process Grade Factor Questions	349
7.3. Life Modeling Example	350
7.3.1. Introduction	350
7.3.2. Approach	350
7.3.3. Reliability Test Plan	350
7.3.4. Results	352
7.3.4.1. Times to Failure Summary	352
7.3.4.2. Life Models	354
7.4. NPRD Description	357
7.4.1. Data Collection	358
7.4.2. Data Interpretation	361
7.4.3. Document Overview	366
7.4.3.1. "Part Summaries" Overview	366
7.4.3.2. "Part Details" Overview	373
7.4.3.3. Section 4 "Data Sources" Overview	374
7.4.3.4. Section 5 "Part Number/MIL Number" Index	374
7.4.3.5. Section 6 "National Stock Number Index with Federal Stock Class"	375
7.4.3.6. Section 7 "National Stock Number Index without Federal Stock Class Prefix"	375
7.5. References	375
8. THE USE OF FMEA IN RELIABILITY MODELING	377
8.1. Introduction	377
8.2. Definitions	381
8.3. FMEA Logistics	383
8.3.1. When initiated	383
8.3.2. FMEA Team	383
8.3.3. FMEA Facilitation	384

Table of Contents

	<u>Page</u>
8.3.4. Implementation	385
8.4. How to Perform an FMEA	385
8.5. Identify System Hierarchy	387
8.6. Function Analysis	388
8.7. IPOUND Analysis	388
8.8. Identify the Severity	390
8.9. Identify the Possible Effect(s) that Result from Occurrence of Each Failure Mode	392
8.10. Identify Potential Causes of Each Failure Mode	392
8.11. Identify Factors for Each Failure Cause	398
8.11.1. Accelerating Stress(es) or Potential Tests	398
8.11.2. Occurrence	398
8.11.2.1. Occurrence Rankings	398
8.11.3. Preventions	401
8.11.4. Detections	401
8.11.5. Detectability	401
8.12. Calculate the RPN	404
8.13. Determine Appropriate Corrective Action	405
8.14. Update the RPN	408
8.15. Using Quality Function Deployment to Feed the FMEA	408
8.16. References	410
9. CONCLUDING REMARKS	411
